Overview

Asia Pacific, Middle East and Africa needs new infrastructure. Roads, airports, schools, hospitals and housing: the list is enormous and growing. Yet severely limited budgets and deficits continue to prevent government at all levels from delivering the kinds of structural change that has always been needed.

In response, countries in the region have developed relatively successful PPP programmes – similar in many ways yet with specific national characteristics. Challenges remain throughout the region and are intensifying in the current environment. This course faces these head on and delivers expertise in an interactive environment filled with case studies, group discussions and technical evaluation.

Course Highlights

- Financial & Commercial aspect of PPP
e.g. funding, how to attract investors, project finance, ROI
- Project aspect of PPP
e.g. project planning, cost control, risk, implementation
- Legal aspect of PPP
e.g. contract, regulation, dispute resolution
- Sector-by-sector analysis of PPP models and structures
- Building a real PPP model using Excel

Benefits of Attending

- Source funding for local and international projects
- Evaluate the successes and failures of private finance
- Know when a project can and cannot be delivered through private finance
- Implement, structure and strategise PPP/PFI projects
- Appreciate different models of private finance infrastructure delivery
- Learn best practice for the delivery of PPP contracts
- Analyse financial and legal aspects of PPP contracts
- Place PPP projects in global context and evaluate the future structure, challenges and prospects for infrastructure in the region
- Apply the principles of local and global private finance experience to other markets
- Learn best practice in PPP modelling
- Build a reliable PPP model from scratch using Excel

Topic Highlights with Case Studies
